ABSTRACT OF THE DISCLOSURE

An interactive learning software program includes a teaching computer, a plurality of operational devices and a notebook computer. The teaching computer is used for executing at least one interactive learning software program. The plurality of operational devices are used by the plurality of students and output an operational instruction to the teaching computer to use the interactive learning system. The notebook computer is used by the teacher, and the notebook computer is capable of executing an interactive control software program to output a control instruction to the teaching computer so that the interactive learning software selectively accepts the operating instruction from the operational device.
